

Who is the app tailored to?

What platform would you like it developed on?

How much can he help / be involved? How does he want to receive reports?

Has he any design features - colour scheme etc wanted?

Does he want the login to be the welcome page?

Does a user need to login each time the app or user is logged in until they log out?

How much of the user details do we need to store in the database?

How many permissions can we access on someone's phone, can they opt in?

If we can't implement voice activation, do you have an alternative way to activate the app?

Can you explain a full run through of the alert process?

Are you familiar with React?

What do you think the benefits of this app are? - Louise
